

PROJECTS NEEDING FUNDING; THE CITY OF ELGIN

These projects do not require design and engineering.

Patch and chip seal 14,000 feet of old, severely cracked pavement; \$70,000.

Chip seal 5,700 feet of gravel surface; \$50,000.

Upgrade and install drainage on 26,000 feet of gravel streets; \$500,000.

The City will invest approximately \$50,000 in these projects this calendar year.

Sand blast, point and seal brick on City Hall; \$50,000.

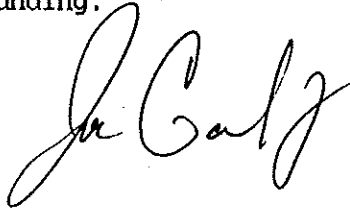

Remove, repair and replace facia and parapet on City Hall; \$50,000.

Install 10" water line to chip mill for fire protection, \$40,000

Replace and/or install 100,000 feet of sidewalk; \$700,000.

The City has less than \$5,000 that can be used for this work.

We have several projects that have some work done on them including zoning and environmental review, but are not ready for construction. Any project that I know of that has all design and engineering completed, already has financing. For the City to commit design and engineering \$\$ to a project without already having construction funding would be unconscionable. It seems to me that this approach to "creating" jobs is disadvantageous to those who already have limited resources but have a real need for funding.

A handwritten signature in cursive script, appearing to read "Joe Carlz", is written in dark ink. The signature is fluid and stylized, with a large initial "J" and a long, sweeping underline.

RE: Congressional Economic Stimulus Package

Enclosed you will find materials which describe the White House's desire to create an Economic Stimulus package. This memo is a very quick request to you — in order to get a list of projects from Oregon's cities that are "ready to go" and would qualify for these funds.

We have no idea whether or not such a funding package will survive congressional action, but our best bet to help ourselves is to BE READY. The Governor's office has requested that we compile a list of projects that are "ready to go" and submit this list to her office by Monday, February 15th. **YOUR IMMEDIATE RESPONSE IS ABSOLUTELY NECESSARY.**

One last note: The Governor's office has also asked COGs and other entities to compile similar lists. They may get overlapping information, but they understand this and are willing to work with all the information they receive. *Please fill in the bottom of this page, even if someone else has already requested the information.*

Quick Definition of "Ready To Go" Projects:

- Projects identified must create jobs in the near term. This could mean construction as well as permanent jobs.
- Projects must be designed, ready for construction, including engineering, completion of any government sign-off, environmental impact work, match requirements in hand, etc., within the next two months.
- Types of projects for which funding can be used include capital construction and/or other economic development projects.

THIS PACKAGE COULD MEAN SUBSTANTIAL FEDERAL MONEY FOR YOUR IMPORTANT LOCAL PROJECTS.

PLEASE COMPLETE THE FOLLOWING AND MAIL THIS ENTIRE PAGE TO L.O.C. IN THE ENCLOSED ENVELOPE:

City ELGIN Contact Person Joe GARLITZ

☒ We do not have any projects that would qualify as "ready to go"

Project Description (one sentence or less) We do have projects that need design & Engineering as well as Construction

Estimated number of jobs created: 4-15

Estimated total project cost (incl. federal, state, local, private): \$800,000 - 3,000,000
